10. **IWONA WOWRO:** Possibilities of Conceptualization of Irony in Aphorisms, Proverbs and Other Humorous Texts

II. PHONLINE – Studien zur linguistischen Phonetik / Studies in Linguistic Phonetics / Studia z fonetyki językoznawczej

The section entitled "PHONLINE – Studies in Linguistic Phonetics" proposed in the framework of the "Linguistic Meetings in Wrocław" 16 (2019) contains a number of contributions devoted to various aspects of phonetics. Phonetics is understood here as a linguistic sub-discipline that deals with all those phenomena that make up the vocal manifestation of language. This view opens up numerous dimensions of phonetic analysis, i.a. segmental, intonatory, prosodic. Both internal-phonetic problems and those areas of speech where phonetics is only their component part will be discussed, e.g. dialectology, conversation analysis and rhetoric, phonodidactics, phonology. In the theoretical as well as experimental approaches, several languages are examined unilaterally as well as comparatively. Among authors of the presented contributions can be found not only experienced specialists but also young scientists.
